

## Applications

- All sectors of Water, Industry and Energy.

## General information

- The range of MR manual actuators developed and manufactured by KSB-AMRI covers output torque values up to 16000 Nm.
- The MR actuators, equipped with non reversible kinematics in all positions, have been designed for all applications and for the operation of any type ¼ turn valves (centred or double eccentric disc butterfly valves, ball valves,...).
- The mounting plate is in accordance with ISO 5211 standard.
- Equipped with an interchangeable insert, they can be easily fitted on different valve shaft (square end, flat end, key,...).
- These actuators are supplied with a handwheel and a visual pointer.
- Force for the handwheel operation according to EN 12570 standard.
- Factory lubricated (silicone free grease), they do not need any maintenance.
- The MR actuators are equipped, in standard version, with adjustable end stops:
  - MR 25 to 200 ( $\pm 2^\circ$ ) in the open and closed positions,
  - MR 400 to 1600 ( $\pm 2,5^\circ$ ) in the closed position.
- Shocks resistance: IK08 minimum according to EN 62262 standard.

## Protection

- They are hose and fine dust proof and are protected against accidental immersion effects, protection degree IP 67.
- Variant: suitable construction for operation with protection degree IP 68 (30 water column meters).

## External coating

- **Standard sealed version:**  
Polyurethane paint (colour dark grey RAL 7016, 80  $\mu\text{m}$  average thickness).
- **Marine version:**  
2 coat system with colour dark grey epoxy paint finish RAL 7016, 150  $\mu\text{m}$  average thickness.

## Working temperature range

- MR 25 to 200 standard version: from  $-20^\circ\text{C}$  to  $+80^\circ\text{C}$
- MR 25 to 200 marine version : from  $-50^\circ\text{C}$  to  $+80^\circ\text{C}$
- MR 400 to 1600 standard version: from  $-20^\circ\text{C}$  to  $+80^\circ\text{C}$
- MR 400 to 1600 low temperature version: from  $-50^\circ\text{C}$  to  $+80^\circ\text{C}$

## Options

- Operation by cardan joint, fountain key, and chain wheel, exchangeable with the handwheel on site,
- Electric limit switch box AMTROBOX,
- Visual indication by a flag,
- Handwheel locking by chain and padlock,
- Closing counter-clockwise,
- Special coating for particular environments,
- Input number of turn (only MR 400 to 1600): Adapted construction on request for a number of turn inferior to the input.
- Remote control devices.
- APSAD version
- UL version

**Production range**

Type	Nominal output torque (Nm)	Nominal input torque (Nm)	Number of turn Handwheel	ISO 5211 mounting plate*	Maximal allowable dimensions for the shaft			
					Height	Driving by square	Driving by Flat	Driving by key
MR 25	250	27	8,0	F07 – F10	50	22	22	Please consult us
MR 50	500	42	10,0	F10 – F12	60	27	27	
MR 100	1000	70	12,5	F12 or F14	70	36	36	
MR 200	2000	100	20,0	F14 or F16	63	50	46	
MR 400	4000	100	48,0	F16	80	60	55

MR 1600	16000	100	290,5	F25 – F30	110	90	85	

\* Direct adaptation onto identical mounting plate.

Adaptation by intermediate flange onto different plate (different size or shape).

**Specific features**
**Range MR 25 to 200**

2 different constructions (see details on pages 4 and 5) are available according to the intended application of the product.

**Standard sealed version**

**Application**

- Non-saline industrial environment with medium corrosion level,
- No limit switch box possible.

**External coating**

Polyurethane paint (colour dark grey RAL 7016, 80 µm thickness).

**Marine version**
**VDI / VDE attachment interface  
Reinforced protection and sealing**

**Application**

- Marine,
- Industrial environment with high corrosion level,
- Buried version,
- Submersible version,
- Limit switch box AMTROBOX, interface VDI/VDE 3845.

**External coating**

Cataphoresis primary + colour dark grey epoxy paint finish RAL 7016, 150 µm average thickness.  
Options: special paints.

**Range MR 400, 800 and 1600**

Manual actuators can be motorized with an electrical motor, later on site (see pages 13 and 15) .

For that, it is necessary to take manual actuators such as defined in the following table and with the appropriated construction .

For subsequent electric motorization or remote actuation Reduction gear required	Replaces reduction gear as per documents "Actuator selection"
MR 400	MR 200
	MR 400
MR 800	MR 600
	MR 800
MR 1600	MR 1200
	MR 1600

### Operation

In standard version, MR actuators are designed to ensure clockwise valve closure. On request, counter-clockwise arrangement is available.

### MR 25 to 200: worm wheel and screw non-reversible kinematics in all positions

The worm wheel and screw kinematics allows to deliver a constant output torque.

Operation is achieved by a device (handwheel, cardan joint, fountain key, chain wheel), linked to the operating screw ① driving in rotation the worm wheel ② integral with the valve shaft.

Graph A: constant output torque

Graph of the worm-screw kinematics

### MR 400 to 1600: yoke non-reversible kinematics in all positions

The yoke kinematics allows to deliver an output torque compatible with the butterfly valves operation for a hydrodynamic torque (similar to the maximum torque).

The movement transmission is carried out by the operating screw system ①, sliding operating nut ②, pressure pads ③, swingle bar ④.

Operation is achieved by a device (handwheel, cardan joint, fountain key, chain wheel), linked to the operating screw ① driving the nut in translation ②.

This movement creates sliding of the pressure pads ③ in the slot of the sliding nut ② and drives in rotation the swingle bar ④ integral with the valve shaft.

Graph of the yoke kinematics

Graph A: Output torque for constant F C = F x D

### Spare parts kits

MR 400 to 1600: Spare parts kits to ensure the watertight are defined on the sheets enclosed in the maintenance document.

### Mounting on valves

#### MR 25 to 200

The actuator: one position only.

#### MR 400 to 1600

The actuator can be positioned at intervals of 90° (Standard arrangement = N / Position 1).

Arrangement N

Position 1

Position 2

← Flow pressure direction in the valve (closed position)

Arrangement M

Position 1

Position 2

← Flow pressure direction in the valve (closed position)

These actuators are equipped with interchangeable inserts manufactured to the size and the form on different valve shaft for motorized operation (square end, flat end, key...).

Worm wheel with driving allowed mounting of the insert at intervals of 45° for MR 25 and 50.

Chuck with square end driving allowed mounting of the insert at intervals of 90° for MR 100 to 1600.

Square end

Flat end

Key end

(Representation: Insert for MR 25 and 50)

**Other available operation devices**
**Operation by cardan joint (Treated steel or stainless steel)**

For remote control from a deck stand, the drive shaft is equipped with a treated steel cardan joint with a 35 mm square end. The cardan joint is zinc. The extension rod, inside square section 35 mm, is supplied with the deck stand to the required length (maxi. 6m). The alternative cardan joint in stainless steel is also available. The remote actuation via deck stand is defined page 13.

Type	E	Weight
MR 25	201	6,0
MR 50	210	7,5
MR 100	262	12,5
MR 200	282	20,0
MR 400	244	58,0
MR 600	285	105,0
MR 800	318	110,0
MR 1200	335	175,0
MR 1600	367	183,0

**Operation by fountain key**

For drinking water in underground circuits, the drive shaft is fitted with a plug square 30 or 50 mm in JS 1030 ductile iron. Actuators with plug square can be operated by:

**for plug square 30 :**

- handwheel dia. 315 mm in ductile iron,
- tee wrench,
- straight wrench in ductile iron, length 370,

**for plug square 50 :**

- remote actuation

These accessories for operation are defined page 14

Type	Square 30		Square 50	
	E	Weight	E	Weight
MR 25	165	5,5	165	6,0
MR 50	173	7,0	165	7,5

MR 1200	370	173,0	375	177,0
MR 1600	345	180,0	345	184,0

**Other available operation devices**
**Operation by chain wheel**

When the pipework is at a higher level, or when the handwheel is not accessible, remote control can be made by a chain wheel fitted on the actuator shaft.

When ordering, the total length of pitched chain required should be specified (pitch 18,5 mm; wire dia. 5 mm, according to DIN 766 standard).

Chain in treated steel or in stainless steel.

As the chain falls down vertically, put the MR below the pipe when the pipe is horizontal.

\* Weight of linear meter of pitched chain: 0,8 kg  
Dimensions are given in mm and weights in kg.

Type	E	K	L	Weight
MR 25	157	200	40	9,5
MR 50	165	200	40	10,5

MR 400	202	400	40	70,0
MR 600				
MR 800	275	400	40	125,0
MR 1200				
MR 1600	325	400	40	200,0

## Other available operation devices

### Handwheel control with extension

For some applications, the operating handwheel must be located further away from the reduction gear. This version is obtained by means of a handwheel control extension:

- steel extension with protection by polyurethane paint RAL 7016, 80 µm thickness as standard;
- drive shaft and attaching hardware of stainless steel;
- operating handwheel identical to the standard handwheel for the reduction gear.

The maximum length of the extension (dimension E) is 3 metres. Please consult us for greater lengths. The minimum length is specified in the table below.

A support, to be installed on site by the customer, is strongly advisable in order to ensure the rigidity of the assembly.

Recommended set-up for this version:

- valve fitted in horizontal position,
- MR with axis of operating shaft vertical,
- control extension with axis vertical.

**MR 25 to 200**

**MR 400, 800 and 1600**

**MR 600 and 1200**

Type	E minimum mm
MR 25	500
MR 50	550
MR 100	600
MR 200	600
MR 400	500
MR 600	500
MR 800	500
MR 1200	600
MR 1600	600

Simpler solutions can be installed with the MR 25 to 200 series but this requires perfect guidance of the drive shaft on site. Please consult us.

## Other available operation devices

### Remote actuation via deck stand

#### Basic version: Control by handwheel

In some installations it is necessary to be able to operate the valves from a different level.  
In others, reasons of positioning or accessibility require the actuating device to be moved away from the valve.

The deck stand makes it possible to remotely operate, from a platform, the valve located at a lower level.  
Operation can be manual or electrical.

In such cases, the valve is equipped with a MR type manual actuator with output through cardan joint and transmission via a linkage assembly.

Misalignment between actuator output shaft and the deck stand shaft is catered for by provision of cardan joints.  
However, the maximum angle between the linkage axis and the axis of the deck stand output shaft (or actuator shaft) must not exceed 30°.

Of cast construction, standard deck stands are hose and fine dust-proof (equivalent to IP 65).

- Deck stand in ductile iron,
- Handwheel in ductile iron,
- Torque-transmitting assembly made of steel,
- Cardan joint in zined steel (in standard) or stainless steel (in option).

Dimension L must be at least equal to 150 mm and must not exceed 6 metres.

The basic deck stand model is not provided with a position indicator.  
This version is available as a design variant.

Protection by polyurethane coating, thickness 80 µm, anthracite grey RAL 7016.

This remote actuation feature is available for actuator types MR25, MR50, MR100, MR 200, MR400, MR800 and MR 1600  
For types MR600 and MR1200 please consult us.

#### Variant : Electric actuation

The valve is actuated via an electric motor which replaces the handwheel.

This actuation method is only possible for types MR400, MR800 and MR1600, which can be fitted with a motor and feature a cardan joint output.

**Options - Control accessories**

**Accessories for operation by fountain key**

Fountain type actuating accessories have been designed for the operation of actuators with plug square 30:

- ductile iron handwheel, 315 diameter,
- tee wrench,
- straight wrench, length 370 mm.

For the operation of actuators with plug square 50: please consult us

**Remote actuation for buried MR version**

For buried and remote applications, a control extension is available.

This extension comprises:

- MR with imperatively, control by 50 mm fountain key providing function of extension sleeve,
- square extension rod 22 mm, standard length 2 m + 30 or 50 square fountain key,
- key port and protective PVC tube.

Note: The length of the extension rod is to be adjusted on site by sawing.

Additional extension is possible by adding a second extension sleeve and a second rod.

**Options**

• **Motor operated actuators (MR 400, 800 and 1600 only)**

It is possible, on request, to obtain an MR actuator for motorized operation by replacing the cast iron operating nut by one in bronze and take a ISO 5210 - F10 base for the servomotor adaptation. These actuators can be retrofitted for motorized operation (delivered with handwheel) or remote actuation with cardan joint output (remote actuation via deck stand with electric actuator).

• **Locking by lead of closing end stop**

It is possible, on request, to lock the closing end stop of the MR in position with a device stainless steel wire and lead. This option can be done on MR 25 to 200 version Marine and MR 400 to 1600.

• **Limit switch indication box**

MR actuators can be equipped with a limit switchbox AMTROBOX.

This switchbox can house up to three switches (one switch on open position, one switch on closed position and one adjustable switch over the full travel).

The switches can be:

- standard or explosion-proof micro-switches,
- standard or inherently safe proximity detectors.

The connection is either made by cable gland or by a special connector.

In standard construction, the protection degree is IP 67.

AMTROBOX is available both in intrinsically safe and explosion-proof version

**MR 25 to 200  
Marine version**

**MR 400 to 1600**

## Options

### • Flag indication

#### MR 25 to 200

When the valve position needs to be seen from a distance, the standard pointer can be replaced by a flag dimension 100x100 mm, colour: yellow RAL 1003 (other colours on request).

#### MR 25 to 1600

Red flag, two faces, dimensions 150 x 250 mm, generally used for marine applications.

On request, faces marking in accordance with the specifications of the customer.

### • Handwheel locking

#### - By chain and padlock

On request, MR actuators can be supplied with a fitting that allows handwheel locking by padlock and stainless steel chain. (Padlock supplied by KSB-AMRI).

#### - By stainless steel plate and padlock

On request, MR actuators can be supplied with a fitting that allows handwheel locking by stainless steel plate and padlock. (Padlock supplied by KSB-AMRI).

### • APSAD version

#### MR 25 to 1600

These actuators are according to APSAD requirements, french insurance for fire system.

These MR actuators associated with the ISORIA valves are designed with:

- Housing in ductile iron
- Indexation device for mounting in blind or by the flat ended shaft of the valve
- Yellow flag 100x100 mm
- Padlocking by chain and padlock of the handwheel
- Internal switches for electrical signalling (in option for MR 25 to 200)

This unit is referenced by APSAD
